THE ELECTRIC MOBILITY

Enjoy the flexibility of an electric car in every moment of your daily life, plan your trips, short or long, without worry!

In addition you will have benefits:

- You can travel at any time, with more freedom to move around cities.
- The battery is your new tank, electricity your new fuel. Drive mobility of the future.
- For a driving experience tailored to selected driving modes.
- Access to 'Ultra Low Emission Zones' (ULEZ) and the Congestion Charge areas.

DRIVE THE CHANGE

To know more about electric mobility

Urban Roads

The average miles driven in a city is up to 30 miles per day. The Fiat 500 electric car can be recharged for up to 30 miles in as little as 5 minutes using a fast charger (85kWhs). Full electric vehicles and plug-in hybrid vehicles are suitable for urban roads. You just have to choose if you want to recharge them domestically or at a public charging point, based on your needs and possibilities. Domestic recharge enables overnight charging and public recharge provides flexibility thanks to the widely available network of charging points.

Extra-urban roads

When you set off on your journey, the on board computer will suggest to you the best route, based on the autonomy of the vehicle and on the charging points available. Based on your driving style, the path will change real time. Minimising the risk of being left with no power.

**Thanks to Leasys, you can drive your electric car
with freedom and enjoy the experience!**
